

OLADIMEJI BENJAMIN OLAOLUWA

No 23 Rose wale, Iwo Road, Ibadan, Oyo State, Nigeria • [+2347063026374](tel:+2347063026374) • benjaminsolaben@gmail.com
<https://benjaminolaoluwa.vercel.app>

CAREER PROFILE

Junior Full-Stack Developer who owns production web apps end-to-end. Currently leading **Ajani ai** — a React + Express 5 + MongoDB booking marketplace for hotels, shortlets, and event halls in Oyo State — and built **EatOrder**, a deployed food delivery + reservations platform on Vercel/Render with Supabase Postgres and Row Level Security. Comfortable with React 18/19, Tailwind v4, Framer Motion, TanStack React Query, REST API design, JWT-based RBAC, and modern deploy pipelines. Cares about clean architecture, accessible UX, performance, and shipping real features fast.

WORK EXPERIENCE

Junior Full-Stack Developer | K3Bot / AjaniAI — Ibadan, Oyo State, Nigeria October 2025 – Present

- Sole developer on the Ajani platform — own frontend, backend, database, and deploy pipeline end-to-end, reporting directly to the founder.
- Translate product direction into shipped features on a weekly cadence: scope tickets, build, test, deploy, and iterate from daily reviews.
- Architect and ship the React + Vite frontend, Express 5 / MongoDB REST API, JWT-based RBAC, and Cloudinary asset pipeline.
- Build and maintain the three audience surfaces — buyer search & booking flow, vendor portal (listings, availability, payouts, accept/reject), and admin moderation panel.
- Run DevOps for the project: Vercel + Render deploys, env-var management, Resend transactional email, PDFKit receipts, and analytics instrumentation.

Front-End Engineer | MIS Specialist (Intern) State Operations Coordinating Unit (SOCU) — Oyo State Government Secretariat, Ibadan January 2025 – December 2025

- Supported the National Social Safety Nets Project (NASSP) by managing data systems that tracked poor and vulnerable households across rural communities in Oyo State.
- Designed and developed front-end web interfaces using HTML, CSS, JavaScript, and React.js to visualize data collected from field operations.
- Maintained and updated the Social Register Database, ensuring data integrity, security, and timely reporting.
- Created dashboards and tools for internal stakeholders to access program data and monitor poverty-alleviation interventions.
- Collaborated with data enumerators, M&E teams, and program officers to streamline data collection, validation, and reporting processes.
- Provided technical support for MIS infrastructure and helped automate report generation for improved decision-making.

PROJECTS

Ajani ai — Full-stack hotels, shortlets & event-halls booking platform for Oyo State (React 18 · Vite · Tailwind v4 · Framer Motion · React Query · React Router 7 · Express 5 · MongoDB / Mongoose · Supabase Auth · Cloudinary · Resend · JWT) [Project Link · https://ajani.ai](https://ajani.ai)

- Architected an end-to-end booking marketplace covering customer search, vendor onboarding, admin moderation, payments, reviews, and AI-assisted price intelligence — **three audiences (buyers, vendors, admins) on one codebase**.
- Designed a layered **Express 5 REST API** (`routes` → `middlewares` → `controllers` → `services` → `models`) with JWT auth, RBAC, helmet, CORS allow-listing, express-rate-limit, hpp, mongo-sanitize, and centralized error handling.
- Modeled domain entities (`User`, `Listing`, `Booking`, `Review`, `Payment`, corporate accounts) in MongoDB via Mongoose; integrated **Cloudinary** image uploads (multer), **Resend / nodemailer** transactional email, and PDF receipts via `pdfkit`.
- Built a **Vite + React 18** frontend with route-level code splitting, **TanStack React Query** caching, **Framer Motion** shared-element transitions (Airbnb-style search popovers via `layoutId`), and SEO-friendly slugs + sitemap.
- Shipped an **Airbnb-inspired hero search** (portal-rendered Where/When/Who popovers, two-month range calendar, location autocomplete) plus a **vendor portal** (AI listing description generator, touch-drag availability calendar, payouts, accept/reject by email-link) and **admin panel** (AI Price Intelligence, automation, field-agent management).
- Instrumented **multi-step analytics** (search → view → booking funnel, IntersectionObserver impression batching) feeding downstream BI; built a one-click `/booking-action` page so vendors approve/reject from an email link.

Speedtouch — Full-stack e-commerce platform for a Nigerian cleaning service _React 19 · Vite · Tailwind CSS v4 · React Router 7 · Supabase (Auth, Postgres, Storage, RLS, triggers) · Paystack · Lucide / React Icons · vite-plugin-pwa IntersectionObserver [Project Link · https://speedtouch-virid.vercel.app](https://speedtouch-virid.vercel.app)

- Shipped a complete storefront end-to-end: marketing home with services + Jumia-style product strip in NGN (`toLocaleString('en-NG')`), full `/products` listing with category filters & search, `/products/:id` detail with related items, slide-out cart drawer with `localStorage` persistence, **delivery-vs-pickup** checkout, order confirmation, and a protected `/admin` surface — all behind `React.lazy` + `` with hash-aware `` for cross-route navigation.
- Built the **admin dashboard** (Overview, Orders, Customers, Products, Services, Settings) behind a Supabase Auth gate with a sticky sidebar layout — revenue + order stat cards, low-stock alerts, image-upload forms wired to dedicated `product-images` / `service-images` storage buckets, and a per-order status dropdown that writes back to Postgres on change.
- Designed the **Postgres schema** (products, services, orders, order_items) with split Row Level Security — public anonymous reads, anonymous order inserts, authenticated-only admin reads/updates — plus a `SECURITY DEFINER` trigger that **atomically decrements product stock** on every `order\_items` insert (clamped at zero) so the front-end's stock-progress bars and "Sold out" overlays stay synced with the database.
- Integrated **Paystack** payments via the inline popup with a promise-based wrapper (NGN→kobo conversion, resolves on success / rejects on customer-close); order rows only commit to Postgres after a successful charge so cancelled payments never pollute the orders table — and the Paystack reference round-trips from the client into Postgres and surfaces on the admin order detail.
- Designed a **cinematic hero** with an autoplaying CC0 video (Mixkit, hotlink-friendly) + `onError` poster fallback, a mobile-first **swipe carousel** (`snap-x snap-mandatory`, live `1 / 6` index counter driven by `onScroll` distance-from-center math), CSS-keyframed marquee, and `` entrance animations that respect `prefers-reduced-motion` and skip below `sm`.

- Made the site an **Installable PWA** with `vite-plugin-pwa` (autoUpdate service worker, Workbox precache, `navigateFallbackDenylist` to stop SW from intercepting `/assets/\*` chunks), a **platform-aware Install button** (`beforeinstallprompt` for Android/Chrome, share-sheet modal for iOS Safari), and tuned **Vercel** deploy with SPA rewrites + 1-year `Cache-Control: immutable` on hashed assets and `must-revalidate` on `index.html` / `sw.js`.

EDUCATION

- **B.Sci Economics** Dec 2020 – Mar 2024
Ladoke Akintola University of Technology, Ogbomoso, Oyo State, Nigeria
- **Diploma, Front-End Web Development** 2023
Udemy
- **Diploma, Facebook Front-End Web Development** 2024
Coursera

TECHNICAL SKILLS

Frontend · React 18 / 19, Vite, Tailwind CSS v4, Framer Motion, React Router 7, TanStack React Query, React Hook Form, Lucide / React Icons, Leaflet, JavaScript (ES6+), HTML5, CSS3

Backend · Node.js, Express 4 / 5, REST API design, Mongoose, Multer, Helmet, express-rate-limit, express-validator, http, mongo-sanitize

Database & Auth · MongoDB, PostgreSQL, Supabase (Auth, Database, Row Level Security), JWT, bcrypt

Email & PDF · Resend, Nodemailer, PDFKit

Cloud & Tooling · Cloudinary, Vercel, Render, cPanel, Git, GitHub, npm

AI / Productivity · Claude (Sonnet, Opus) for pair-programming and code review, Claude Code CLI, DeepSeek, ChatGPT, Cursor — comfortable scoping and shipping features alongside an AI agent

Practices · Role-based access control (RBAC), JWT authentication, route-level code splitting, persisted client caching, responsive mobile-first design, accessibility, analytics instrumentation, SEO-friendly slugs

SOFT SKILLS

Communication · Problem Solving · Creativity · Teamwork · Time Management · Attention to Detail · Continuous Learning
