CAREER PROFILE

Junior Full-Stack Developer who owns production web apps end-to-end. Currently leading **Ajani Digital Smart Services**, a React + Express 5 + MongoDB booking marketplace for hotels, shortlets, and event halls in Oyo State. Built EatOrder and Speedtouch, deploying full-stack platforms on Vercel/Render with Supabase Postgres and Row Level Security. Comfortable with React 18/19, Tailwind v4, Framer Motion, TanStack React Query, REST API design, JWT-based RBAC, and modern deploy pipelines. Cares about clean architecture, accessible UX, performance, and shipping real features fast.

WORK EXPERIENCE

Junior Full-Stack Developer | Ajani Digital Smart Services – Ibadan, Nigeria

Oct 2025 – Present

- **Primary developer** on the Ajani platform; own frontend, backend, database, and deploy pipeline end-to-end, reporting directly to the founder.
- Translate product direction into shipped features on a weekly cadence: scope tickets, build, test, deploy, and iterate from daily reviews.
- Architect and ship the React + Vite frontend, Express 5 / MongoDB REST API, JWT-based RBAC, and Cloudinary asset pipeline.
- Build and maintain the three audience surfaces: buyer search & booking flow, vendor portal (listings, availability, payouts, accept/reject), and admin moderation panel.
- Run DevOps for the project: Vercel + Render deploys, env-var management, Resend transactional email, PDFKit receipts, and analytics instrumentation.

Front-End Engineer | MIS Specialist (Intern) – SOCU, Oyo State Secretariat

Jan 2025 – Dec 2025

- Supported NASSP by managing data systems that tracked poor and vulnerable households across rural communities in Oyo State.
- Designed and developed front-end web interfaces using HTML, CSS, JavaScript, and React.js to visualize data collected from field operations.
- Maintained and updated the Social Register Database, ensuring data integrity, security, and timely reporting.
- Created dashboards and tools for internal stakeholders to access program data and monitor poverty-alleviation interventions.
- Collaborated with data enumerators, M&E teams, and program officers to streamline data collection, validation, and reporting processes.
- Provided technical support for MIS infrastructure and helped automate report generation for improved decision-making.

PROJECTS

Ajani Digital Smart Services

React 18, Vite, Tailwind v4, Express 5, MongoDB, Supabase, JWT

- Architected an end-to-end booking marketplace covering customer search, vendor onboarding, admin moderation, payments, reviews, and AI-assisted price intelligence across three audiences (buyers, vendors, admins) on one codebase.
- Designed a layered Express 5 REST API (routes, middlewares, controllers, services, models) with JWT auth, RBAC, helmet, CORS allow-listing, express-rate-limit, hpp, mongo-sanitize, and centralized error handling.
- Modeled domain entities (User, Listing, Booking, Review, Payment, corporate accounts) in MongoDB via Mongoose; integrated Cloudinary image uploads (multer), Resend/nodemailer transactional email, and PDF receipts via PDFKit.
- Built a Vite + React 18 frontend with route-level code splitting, TanStack React Query caching, Framer Motion shared-element transitions (Airbnb-style search popovers via layoutId), and SEO-friendly slugs + sitemap.
- Shipped an Airbnb-inspired hero search (portal-rendered Where/When/Who popovers, two-month range calendar, location autocomplete) plus vendor portal (AI listing description generator, touch-drag availability calendar, payouts, accept/reject by email-link) and admin panel (AI Price Intelligence, automation, field-agent management).
- Instrumented multi-step analytics (search view, booking funnel, Intersection Observer impression batching) feeding downstream BI; built a one-click/booking-action page so vendors approve/reject from an email link.

Speedtouch (speedtouch.com.ng)

React 19, Vite, Supabase (Postgres, RLS), Paystack, PWA

- Shipped a complete storefront: marketing home with Jumia-style product strip in NGN, full/products listing with category filters & search, /products/:id detail with related items, slide-out cart drawer with localStorage persistence, delivery-vs-pickup checkout, order confirmation, and a protected/admin surface all behind React.lazy + Suspense.
- Built the admin dashboard (Overview, Orders, Customers, Products, Services, Settings) behind a Supabase Auth gate with a sticky sidebar layout – revenue + order stat cards, low-stock alerts, image-upload forms wired to dedicated storage buckets, and a per-order status dropdown that writes back to Postgres on change.
- Designed the Postgres schema (products, services, orders, order_items) with split Row Level Security: public anonymous reads, anonymous order inserts, and authenticated-only admin reads/updates, plus a SECURITY DEFINER trigger that atomically decrements product stock on every order_items insert (clamped at zero).
- Integrated Paystack payments via the inline popup with a promise-based wrapper (NGN kobo conversion); order rows only commit to Postgres after a successful charge so cancelled payments never pollute the orders table.
- Made the site an installable PWA with vite-plugin-pwa (autoUpdate service worker, Workbox precache), a platform-aware Install button (beforeinstallprompt for Android/Chrome, share-sheet modal for iOS Safari), and tuned Vercel deploy with SPA rewrites + 1-year Cache-Control: immutable on hashed assets.

TECHNICAL SKILLS

Frontend

React 18/19, Vite, Tailwind CSS v4, Framer Motion, React Router 7, TanStack React Query, React Hook Form, Lucide / React Icons, Leaflet, JavaScript (ES6+), HTML5, CSS3

Backend

Node.js, Express 4/5, REST API design, Mongoose, Multer, Helmet, express-rate-limit, express-validator, hpp, mongo-sanitize

Database & Auth

MongoDB, PostgreSQL, Supabase (Auth, Database, Row Level Security), JWT, bcrypt

Cloud & Tooling

Cloudinary, Vercel, Render, cPanel, Git, GitHub, npm

AI & Productivity	Claude (Sonnet, Opus), Claude Code CLI, DeepSeek, ChatGPT, Cursor (highly efficient scoping and shipping features alongside an AI agent)
Core Practices	RBAC, JWT Auth, route-level code splitting, client-side caching, responsive mobile-first design, accessibility, analytics instrumentation, SEO optimization

EDUCATION

B.Sc Economics – Ladoke Akintola University of Technology, Ogbomoso, Nigeria	Dec 2020 – Mar 2024
Diploma, Front-End Web Development – Udemy	2023
Diploma, Facebook Front-End Web Development – Coursera	2024

Open to junior/mid full-stack and front-end opportunities (remote, Lagos, or Ibadan-based).
